

Enjoy your new TRU-TONE BULBS novelty light-up sign!

Just like our popular retail sign in a new **Fun-Size!**

Single-Sided Assembly Instructions:

With the lamp socket facing downward, push the socket clip through the slot on the sign back. Beginning on the same side as the socket, thread the included zip tie through the holes on either side of the socket. Wrap the zip tie around the socket and close the zip tie to secure the socket in place.

Align the sign face to the sign back, routing the wire through the top or bottom slot (depending on your installation). The included push-to-fit connectors should be snapped together in each of the 6 perimeter holes. The connectors are removable in case you need to access the light bulb.

SEE OTHER SIDE FOR DOUBLE-SIDED SIGN--->

Double-sided Assembly Instructions:

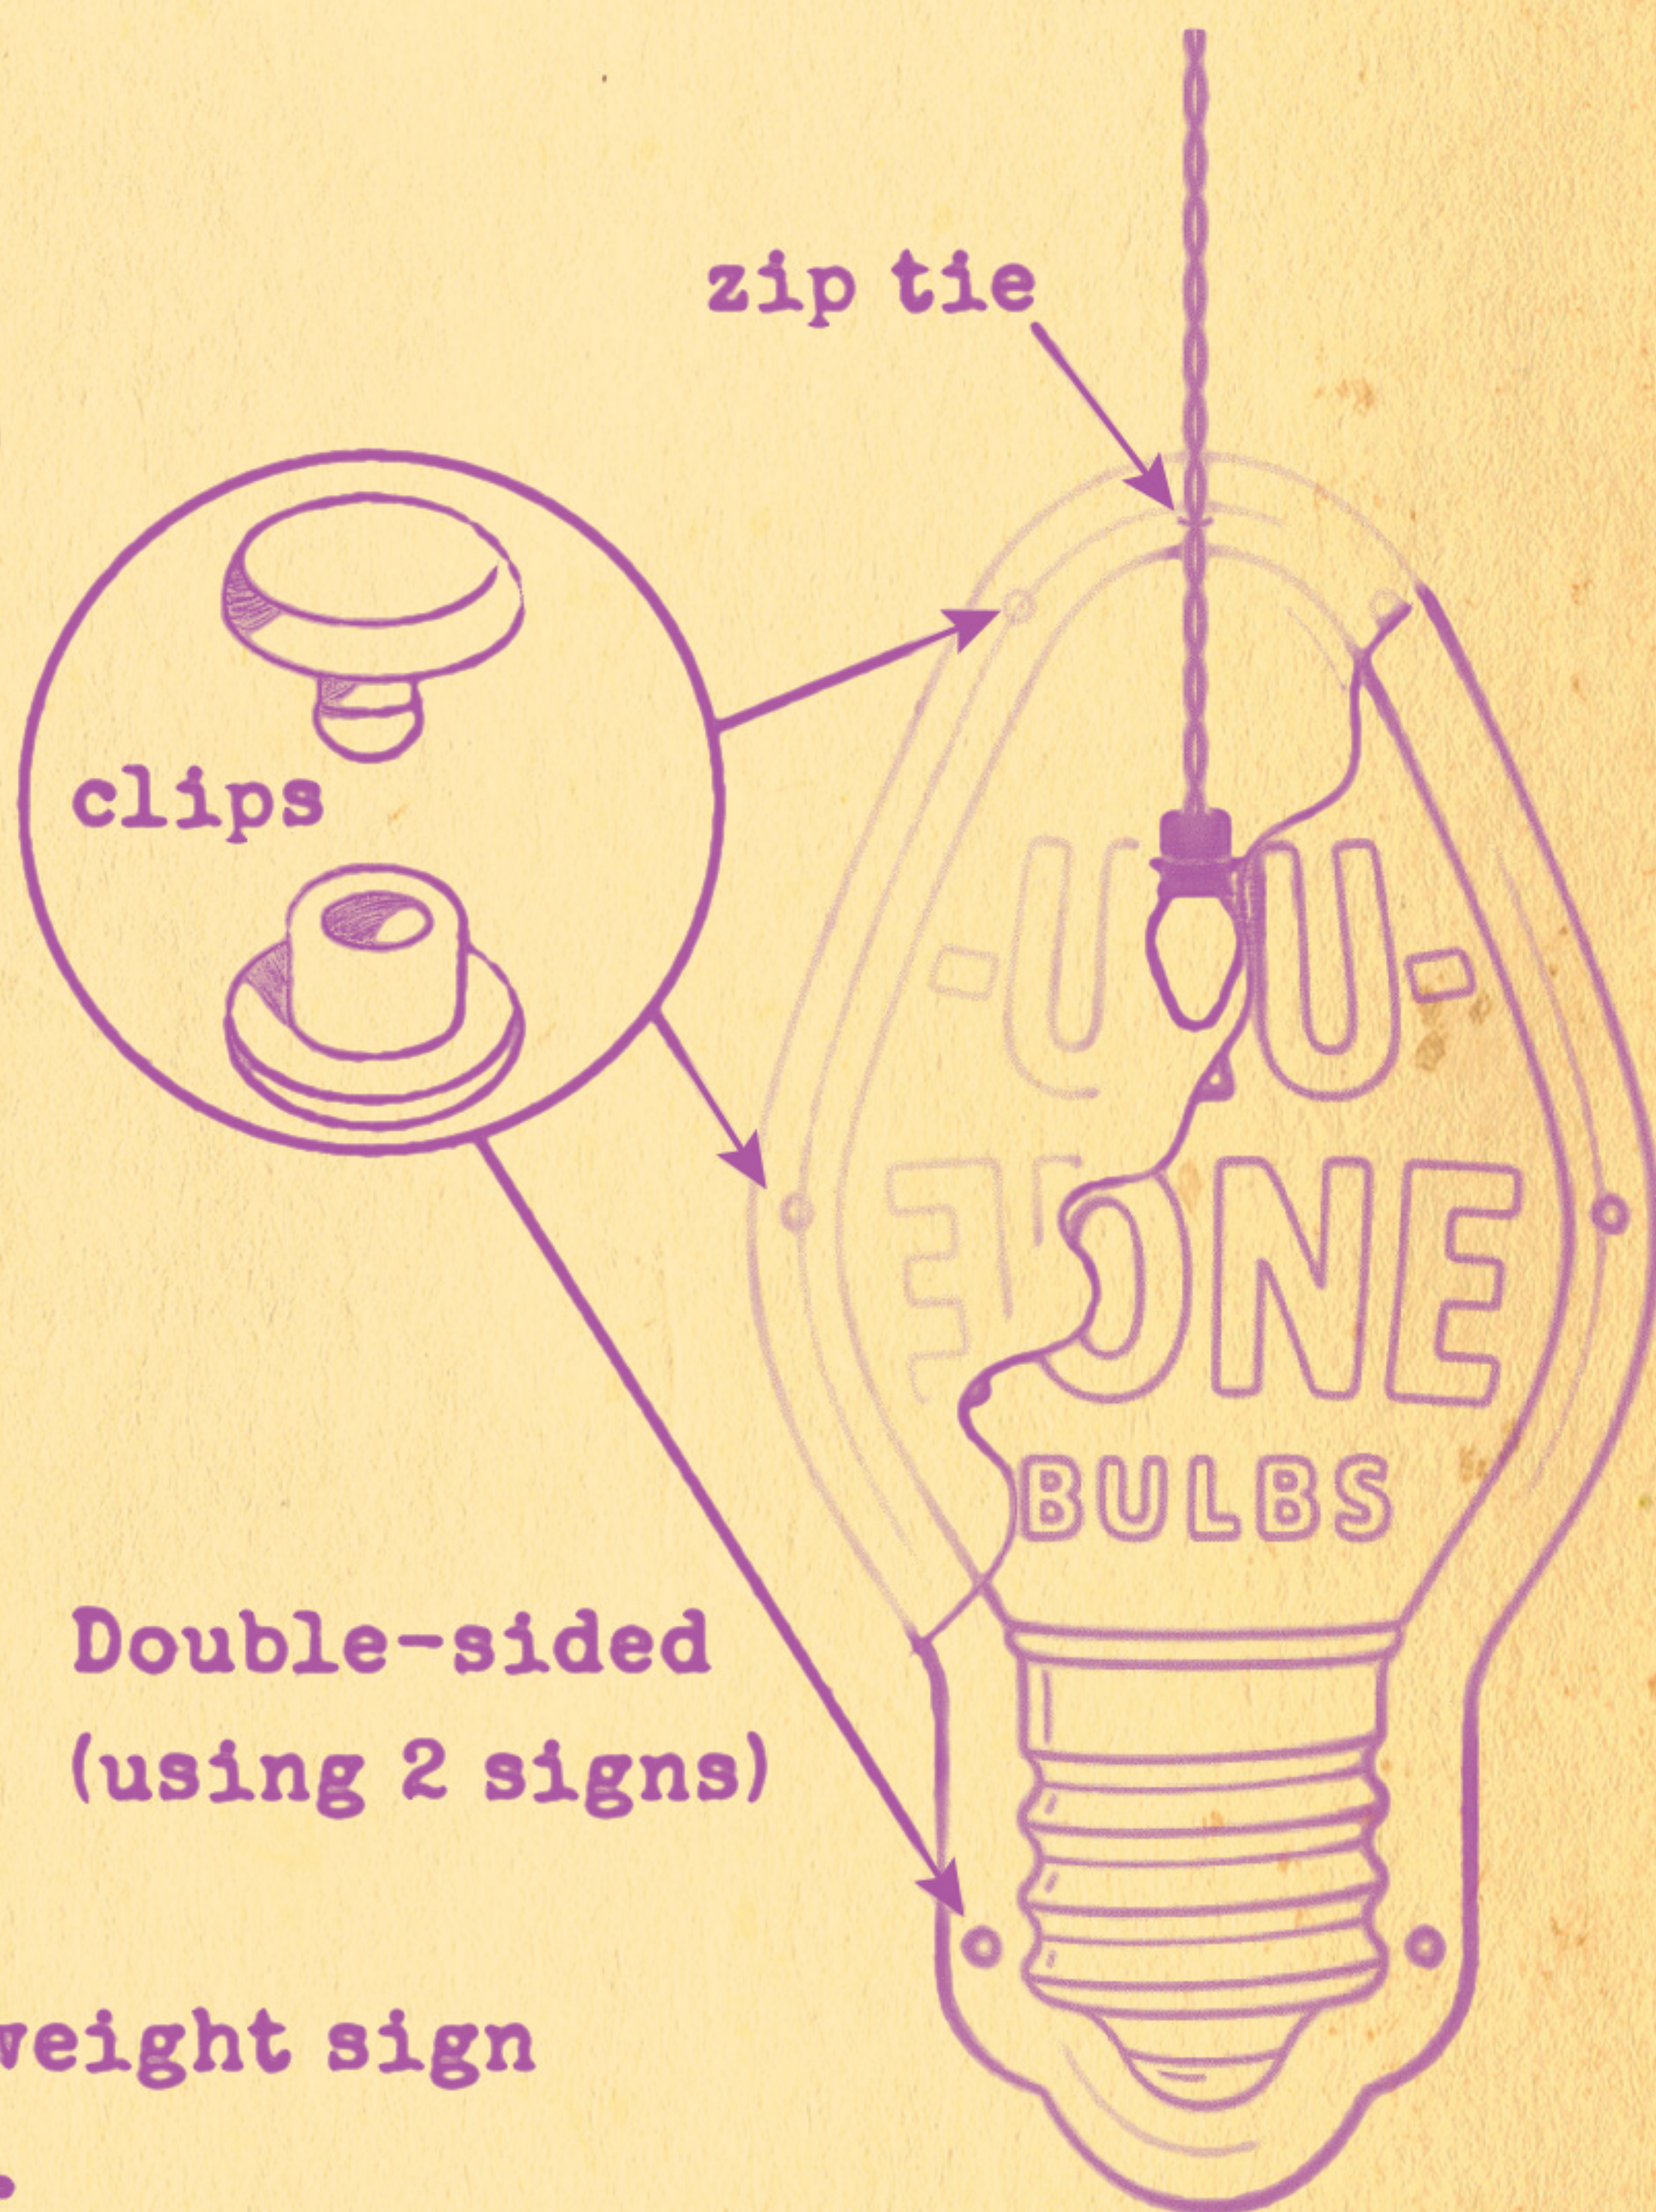

This option requires two signs.
You will not be using the sign backs.

Wrap an included zip tie tightly around the light string about 5" from the light socket. Trim the excess from the secured zip tie. The zip tie will prevent the cord from sliding out, keeping the bulb hanging in the optimal location inside the sign.

Align the sign faces back-to-back, routing the light string through the top of the sign (the secured zip tie will rest on the inside edge of the sign).

The included push-to-fit connectors should be snapped together in each of the 6 perimeter holes. The connectors are removable in case you need to access the light bulb.

It is safe to hang this lightweight sign directly from the light cord.
